Google is one of the best search engines for the web. It is available everywhere from the desktop to the mobile device. Google is not only popular among humans but also among computer programs that target the human race. Why? Because the human brain is far more complex than the vast majority of computer programs. An experiment by Northwestern University suggests that even the programs on computers designed to mimic the human brain, are susceptible to clever psychological tricks. One of these is

RSA-Tools is a set of software applications designed to simplify the life of RSA users by providing tools for encrypting, decrypting, signing, verifying, generating and importing RSA keys, managing hash files and RSA history. Warner Bros. is wasting no time with their DC Comics-crossover film Justice League. The studio is already planning to keep director Zack Snyder and his League of Extraordinary Gentlemen on through 2018 to start production on that follow-up, set for release on November 17, 2019. And that's not all. As they start production on Justice League Part 2, they've also announced that the next film in their DC Extended Universe will be Wonder Woman. After the two films are released, Batman, the Flash, and Aquaman will follow sometime in 2020. Wonder Woman was announced back in December as the follow up to Batman v Superman: Dawn of Justice, meaning that it will be released just before Justice League Part 2. The film stars Gal Gadot and Chris Pine. The film was written by Joss Whedon with a rewrite from Snyder. It's also being directed by Patty Jenkins, who was behind the hugely popular Monster's Ball. "We are thrilled to be taking Wonder Woman to the screen. She is a pop culture phenomenon, and we are honored and excited to have the opportunity to direct her to the big screen," Jenkins said. Wonder Woman comes as welcome and overdue news to fans of both the character and the director. Jenkins had been working on a prequel story for the character for a long time before being hired for the movie, and Gadot has been in the Justice League conversation for as long as she has been an actress. It's notable that the film is being written by Whedon, who is best known for his work on Buffy the Vampire Slayer, and who has been campaigning to get Wonder Woman into the MCU for a long time. He told io9 just last month that he had been working with Warner Bros. to try to make that happen. Fans have also been clamoring for a Wonder Woman movie for a long time, so this is a pretty excellent result for everyone involved. Now we just have to wait a few months to find out if the ending to BvS was a fluke or if it was a necessary evil to cement Warner Bros.' place in the DC Cinematic Universe. Justice League Part 2 will start shooting sometime this fall, with a 2018

RSA-Tools Description: RSA-Tools is a handy, easy to use tool designed to offer users many options to help them handle RSA-Keys and supports decryption, encryption, signing and verification. **RSA-Tools Key Features:** Good support of RSA-keys RSA-Tools uses our own PKCS#11-based security provider to handle keys which works by establishing a connection to the key manager of the underlying PKCS#11-implementation (for Windows only). On Windows this is the standard Microsoft Security Provider Interface (SPI) - based on the CSP-interface. On Linux this is typically the Native PKCS#11-interface (NKS). **Multiple key types** RSA-Tools provides support for using a keystore of type RSA-sign, RSA-encryption, RSA-decryption, RSA-sign, RSA-encryption, RSA-decryption. This is useful when you have PKCS#11 tokens from multiple vendors that do not support all possible operations. **Multiple keys for a same token** You can also use the same token to decrypt RSA-keys that you have encrypted by RSA-Tools. After encrypted the keys are marked as "external" or "local". **Multi file support** RSA-Tools supports decryption or encryption of multiple files at once. A standard keystore can contain 10 files and over 1000 files. **Cross-platform support** RSA-Tools can be used on the Windows and Linux/Unix platform. **Support for signature verification or signature generation** RSA-Tools can also be used to generate or verify a signature. The verification/generation has to be setup before hand and is done either with the -sign or -verify option. RSA-Tools is very feature rich and we received some very good feedback at the presentation at the Green IT Summit by Mr. Torsten Scheck, who asked us to make RSA-Tools available under GNU. RSA-Tools is now available as software under GNU/Linux and we also made it available under Windows. **Q: Only one instance of a particular artifactID exists on repository** Maven central I have created a Maven repo with a single file containing a list of my repository artifacts.
